# Patient Passport Express Desktop PPE

The Patient Passport Express® Desktop provides a patient check-in experience for your desktop locations when floor space is at a premium or not available. The Patient Passport Express® Desktop brings many of the features of the PPE line consolidated in a desktop foot print. A significant mix of materials and branding provides nearly infinite choices of customized textures and colors, allowing the enclosure to be integrated seamlessly into existing décor.

### Key Features

- USFF PC
- 19" monitor w Privacy Screen
- HiBright Screen
- Printer Options
- Modular Peripherals
- Branding Options
- Warranty Options

With patients being more willing to take charge of their healthcare why not start at the beginning with check in? Automation of the check in process is becoming more and more mainstream. Airlines do this, retailers do this. Why not your organization? The PPE Desktop kiosk brings to your organization a future proof kiosk which allows for interchanging of peripherals and PC components. When requirements change your kiosk should be able to change as well without a total reinvestment.

The PPE kiosk features an all-metal powder coat covered casing with deburring and attention to smoothness. This provides protection and safety to your team members when they need to service the device while also protecting equipment within. All of the cabling management is done with a color chart to quickly identify cables at both ends, not spending time tracing cables. Cables are secured and wrapped for maximum protection as they are installed in the unit. Security of the kiosk is with a simple yet effective key lock to contain all of the elements of the kiosk safely within. Access points to the kiosk are for power and LAN only which can also be provided from under the unit as well. The entire system is kept filtered and cool with an always on induction fan that provides overpressure pushing dust and debris out of the chassis.

System		Kiosk	
PC	Optional	Primary Power	Standard 110 grounded outlet with 7 port power strip
